DECEMBER 1981

NUCLEAR PHYSICS B

Journal devoted to the experimental and theoretical study of the fundamental constituents of matter and their interactions

Associate Editors: N. Cabibbo, Rome; D. Cline, Wisconsin; R.H. Dalitz, Oxford; S. Glashow, Harvard; R.J. Glauber, Harvard; V.N. Gribov, Leningrad; D. Gross, Princeton; L.M. Lederman, Fermilab; R.G. Moorhouse, Glasgow; R.J.N. Phillips, Rutherford; K. Symanzik, DESY; G. 't Hooft, Utrecht; S.C.C. Ting, DESY-MIT; J. Weyers, Louvain; B. Wiik, DESY; F. Zachariasen, CALTECH; J. Zinn-Justin, Saclay

Supervisory Editors: G.C. FOX, J. ILIOPOULOS, H.J. LIPKIN, D.R.O. MORRISON, H.R. RUBINSTEIN, M. VELTMAN

Administrative Editors: K. Jones, W. Hass

LAST NUMBER OF THIS VOLUME

NOTE TO AUTHORS

Contributions for Nuclear Physics B should be sent in duplicate to the Editorial Office of "Nuclear Physics", Nordita, Blegdamsvej 17, DK-2100 Copenhagen Ø, Denmark, *Contributions from the USA* may be sent also to one of the following associate editors: Prof. D. Cline, Dept. of Physics, University of Wisconsin, 457 North Charter St, Madison, Wisc. 53706, Prof. D. Gross, Dept. of Physics, Princeton University, Jadwin Hall, P.O. Box 708, Princeton, N.J. 08540, and Prof. F. Zachariasen, Caltech, Pasadena, Cal. 91109. They should be accompanied by a covering letter, indicating, in case of joint authorship, to whom further correspondence, proofs, etc. should be addressed. Authors should take care that their contributions are written in good English; "broken English" is not acceptable.

Manuscripts for Nuclear Physics B should be prepared in accordance with the rules and conventions outlined in **Instructions to Contributors** which appear on the rear inside cover of most issues.

All papers are subject to refereeing. "Letter-type" contributions and unnecessarily long papers are unacceptable. Authors should make every effort to achieve the utmost concision compatible with clarity. They should make a careful survey of the literature to ensure that papers do not duplicate previous work and that relevant existing knowledge has been taken into account. It should be realised that the criteria for refereeing are very high. *At present only 50% of the papers submitted are immediately acceptable.*

The Editors and Publishers aim at the following *time schedule*: within one week of submission the Author should have received acknowledgement of receipt of his manuscript. Within two months (normally within one month) he should have had notification of acceptance or rejection, or a request for revision. After receipt of an acceptance card, he should receive proofs within six weeks. Finally, six weeks after returning the corrected proofs, the paper should be published. If this schedule is not adhered to, Authors are requested to notify the Editorial Office and/or the Publisher.

NUCLEAR PHYSICS A is published in weekly issues. The subscription price per volume is Dfl. 218.00 Postfree.

NUCLEAR PHYSICS B is published four times per month. The subscription price per volume is Dfl. 218.00 Postfree. Combined subscription to both section A and B Dfl. 178.00 Postfree. Back volumes Dfl. 220.00 per volume Postfree.

SUBSCRIPTIONS should be sent to the Publishers, NORTH-HOLLAND PUBLISHING COMPANY, P.O. Box 211, 1000 AE Amsterdam, or to any subscription-agent.

CLAIMS FOR ISSUES NOT RECEIVED should be made within three months of publication. If not, they cannot be honoured free of charge.

BOOKS FOR REVIEW should be sent to the Editorial Office of "Nuclear Physics".

Leptons and Quarks

by L. B. OKUN, *Institute for Theoretical and Experimental Physics, Academy of Siences of the U.S.S.R., Moscow.*

1981 viii + 334 pages. Price: US $ 80.50/Dfl. 165.00 ISBN 0-444-86002-9

This book is an introduction to the theory of the weak interaction of elementary particles. It is based on the annual course of lectures that the author gives at the Institute of Theoretical and Experimental Physics to graduate students of the Moscow Physico-Technical Institute who specialize in experimental high-energy physics.

The author outlines the current situation in weak interaction theory and discusses the prospects for the coming decade. The reader is familiarized with simple theoretical techniques for the calculation of decay rates, interaction cross-sections and angular and spin correlations.

The first seventeen chapters are devoted to the phenomenological analysis of weak processes at "low energies", that is, below the threshold of intermediate boson production. This part of the book can be regarded as a theoretical commentary to the well-known 'Rosenfeld' tables of elementary particles. The following seven chapters are mostly an introduction to the unified gauge theory of electromagnetic and weak interactions, with the main emphasis on the physical, not formally mathematical, side of the gauge theory. Of the remaining six chapters, two give a brief description of attempts to construct a unified theory of all known interactions. Another chapter contains a short digression to astrophysics and cosmology in relation to the properties of elementary particles. This is followed by an annotated bibliography, a mathematical Appendix and tables of experimental data.

The book is addressed to experimental physicists who are familiar with relativistic quantum mechanics and with some elements of quantum field theory. The author demonstrates how much can be calculated, explained and even predicted by using the simplest tools.

CONTENTS: Preface. *Chapters:* 1. Introduction. 2. Structure of Weak Currents. 3. Muon Decay. 4. Strangeness-Conserving Leptonic Decays of Hadrons. Properties of the ud-Current. 5. Leptonic Decays of Pions and Nucleons. 6. Leptonic Decays of K-Mesons and Hyperons. 7. Strangeness-Changing Nonleptonic Interaction. 8. Phenomenology of Nonleptonic Decays of Hyperons. 9. Dynamics of Nonleptonic Decays of Hyperons. 10. Nonleptonic Decays of K-Mesons. 11. Neutral K-Mesons in Vacuum and in the Medium. 12. Violation of the CP-Invariance. 13. Decays of τ Lepton. 14. Decays of Charmed Particles. 15. Weak Decays of b- and t-Quarks. 16. Neutrino-Electron Interactions. 17. Neutrino-Nucleon Interactions. 18. Renormalizability. 19. Gauge Invariance. 20. Spontaneous Symmetry Breaking. 21. Standard Model of Electroweak Interaction. 22. Neutral Currents. 23. Properties of Intermediate Bosons. 24. Properties of Higgs Bosons. 25. Grand Unification. 26. Supersymmetry. 27. Particles and the Universe. 28. Bibliography. 29. Appendix (Some Useful Formulas). 30. Tables of Experimental Data.

STUDIES IN STATISTICAL MECHANICS, IX

Perspectives in Statistical Physics

edited by H. J. RAVECHÉ, *National Bureau of Standards, United States Department of Commerce, Washington, DC 20234, U.S.A.*

1981 xxviii + 368 pages Price: US $73.25/Dfl. 150.00 ISBN 0-444-86026-6

This volume contains eighteen chapters covering a broad spectrum of topics in the fields of nonequilibrium processes, phase transitions, dynamical systems, interfaces and quantum phenomena. Each chapter contains original work or gives a critical assessment of earlier work for the purpose of revealing future directions. The contributions were received from colleagues of Melville S. Green as a memorial to his extraordinary research in statistical physics. The chapters follow the example set by M. S. Green for exposing profound issues. Research workers and graduate students will find that the volume provides stimulating perspectives for further research.

CONTENTS: Dedication to M. S. Green *(H. J. Raveché).* Remarks on M. S. Green (1) *(E. G. D. Cohen).* Remarks on M. S. Green (2) *(Michael E. Fisher).* M. S. Green's Curriculum Vitae. M. S. Green's Publications. **Part I. Non-Equilibrium Processes.** *Chapters:* 1. The Lorentz Gas *(B. J. Alder and W. E. Alley).* 2. Some Recent Developments in the Kinetic Theory of Gases *(J. R. Dorfman).* 3. Non-Equilibrium Fluctuations and the Hierarchy *(M. H. Ernst and E. G. D. Cohen).* 4. Green's Contributions to Non-Equilibrium Statistical Mechanics Revisited *(L. S. Garcia-Colin and J. L. Del Rio).* 5. Stochastic Description of Many-Body Systems *(N. G. van Kampen).* 6. H-Theorems for Markoffian Processes *(R. Kubo).* 7. Energy Flow and Thermal Conductivity in One-Dimensional Harmonic, Isotopically Disordered Crystals *(R. J. Rubin).* 8. Where Do We Go From Here? *(R. Zwanzig).* **Part II. Phase Transitions.** *Chapters:* 9. A New Model Hamiltonian for a Correlated Electron System Within the General Framework of Critical Phenomena and Phase Transitions *(C. di Castro).* 10. Membrane Flux: Conditions for Limit Cycle Oscillations *(A. G. De Rocco and G. L. Clark).* 11. Critical Phenomena - A Model Illustration of Scientific Method *(C. Domb).* 12. Coarse-Grained Helmholtz Free Energy Functional *(K. Kawasaki et al.).* 13. Exact Renormalization in Two Dimensional Ising Systems *(J. M. J. van Leeuwen).* 14. How Close is "Close to the Critical Point"? *(J. M. H. Levelt Sengers and J. V. Sengers).* 15. The Interface Between Fluid Phases *(B. Widom).* **Part III. Foundations.** *Chapters:* 16. On Higher Order WKB Approximations for the Calculation of Energy Levels *(F. T. Hioe et al.).* 17. Equilibrium Density Matrix for Fluids *(J. E. Mayer).* 18. The Mechanisms of Stochasticity in Classical Dynamical Systems *(A. S. Wightman).* Subject Index.

Book 1 Physics and the Atomists
1976 xiv + 326 pages US $48.75/Dfl. 100.00
ISBN 0-7204-0370-7

Book 2 Statistical Physics and Irreversible Processes
1976 xiv + 494 pages US $87.75/Dfl. 180.00
ISBN 0-7204-0482-7

2 vol. set US $122.00/Dfl. 250.00
Set ISBN 0-7204-0696x

"...This work is to be thouroughly recommended. It deals not only with the technical aspects of the history of an important area of physics but also shows the important connections it has with philosophy and culture. It deserves to sell well."

Physics Bulletin

Studies in Statistical Mechanics, VII

Fluctuation Phenomena

edited by E. W. MONTROLL and J. L. LEBOWITZ
1979 vi + 350 pages US $63.00/Dfl. 130.00
ISBN 0-444-85248-4

"This book thus covers a variety of physical situations in which fluctuation phenomena play an important role, and should be of value to physicists, physical chemists and materials scientists, especially those concerned with amorphous systems, critical phenomena, and molecular dynamics."
